

Machine Learning Project Report

Team Name

1 Introduction

Describe the problem and the goal of the project.

2 Dataset

Describe the dataset and explain the meaning of important features.

3 Exploratory Data Analysis

Present descriptive statistics and visualizations.

Discuss insights obtained from the analysis.

4 Data Preprocessing

Explain the preprocessing steps performed on the data.

Justify important design decisions.

5 Models

Describe the machine learning models used in the experiments.

Include model parameters and training settings.

6 Experimental Results

Present evaluation metrics and compare model performance.

Tables and figures should be used when appropriate.

7 Error Analysis

Analyze incorrect predictions and discuss possible causes.

8 Conclusion

Summarize the main findings and discuss potential improvements.
